DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 28-29 and 33-40 are rejected under 35 U.S.C. 102(b) as being anticipated by Cline (U.S. Patent No. 1,945,136).

With respect to Claims 28-29 and 33-40, Cline, Figures 1-8, teaches an unwinding device for unwinding reels of web material comprising a rotating element 43 with supports for at least two reels 11,12 and a splicing member to join a first web material coming from an expiring reel to an initial free end of a second web material wound on a new reel; wherein at least one mechanical member 49,51 is associated with each support of said supports to retain the initial free end of the new reel disposed on the support.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 28-61 are rejected under 35 U.S.C. 103(a) as being unpatentable over Simons et al (U.S. Patent No. 3,172,613).

Art Unit: 3654

With respect to Claims 28-40 and 53-61, Cline, Figures 1-8, teaches an unwinding device for unwinding reels of web material comprising a rotating element 3 with supports for at least two reels 6,7 and a splicing member to join a first web material coming from an expiring reel to an initial free end of a second web material wound on a new reel; wherein at least one mechanical member 18 is associated with each support of said supports to retain the initial free end of the new reel disposed on the support. Cline only teaches the use of one mechanical member associated with the support. However, it would have been obvious to one of ordinary skill in the art to a second support since it has been held that mere duplication of the essential working parts of a device involves only routine skill in the art; ply bonding roller 12.

With respect to Claims 41-52, the method described in these claims would inherently result from the use of the unwinding device of Simons et al as advanced above.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
